**DETAILED ACTION**

1. A new non-final action is being issued in this application, in view of newly discovered prior art. The delay in the citing of this art is regretted.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 7 is rejected under 35 U.S.C. 102(e) as being anticipated by Esser.

Esser discloses a bending-resistant bar having a flat cross-section and comprising two end portions 44 (see fig. 3). Note the bridging (raised) portion 46. The end portions have penetrations 48 adapted to receive fastening means for attaching the bar to bone. .

4. Claims 8-13,17-39 are rejected under 35 U.S.C. 102(e) as being anticipated by Branemark '938.

Branemark discloses a device for reshaping human or animal bone, comprising at least two spaced apart implants 8 which have a smooth mantle surface and a blind threaded bore, the implants receiving fasteners 17 which are used to affix a bending resistant bar 3 thereto. The bar 3 has penetrations 15 which appear to be slotted holes. Note that the bar has a flat cross section, and has a convex side and a concave side.

Branemark does not show areas of reduced cross sectional size in the bar to define bending locations therein.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Branemark in view of Esser.

Esser discloses the use of cutouts (reduced cross sections) along the length of a bar type implant.

It would have been obvious to one skilled in the art to include areas of reduced cross sectional size in the bar of Branemark, as shown by Esser, if one wished to apply slight bends to the bar to assure that it conforms anatomically to a patient.

***Allowable Subject Matter***

7. Claims 1-6,40 are allowed.
